DETAILED ACTION

Election/Restriction

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-17, drawn to an isolated nucleic acid encoding a polymerase, classified in class 435, subclass 194.
- II. Claim 18-26, drawn to an isolated DNA polymerase, classified in class 435, subclass 194.
- III. Claim 27, drawn to an assay for identifying functional polypeptide fragments or variants, classified in class 435, subclass 15.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are structurally unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the nucleic acid encoding a DNA polymerase of Group I, and the DNA polymerase of Group II each comprise a chemically unrelated structure capable of separate manufacture, use and effect. The peptide of Group II is comprised of amino acid sequence and the nucleic acid of Group I is comprised of nucleic acid sequence. The nucleic acid has other utility besides encoding protein such as a hybridization probe, and the proteins can be made synthetically. Additionally, the

Art Unit: 1652

protein can be used to perform specific biological function(s) which are independent of the function(s) of the DNA molecule.

Inventions II and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (M.P.E.P. § 806.05(h)). In the instant case the product can be used to induce antibodies or in a method of DNA sequencing.

The nucleic acid of Group I is unrelated to the method of Group III as they are neither used nor made by the method of Group III.

Because these inventions are distinct for the reasons given above, have acquired a separate status in the art as shown by their different classification, and the literature and sequence searches required for each of the Groups are not required for another of the Groups, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

Art Unit: 1652

remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
